

LEARNING LIVE Networks Agenda includes:

**Date** – Wednesday 10 July

**Location** – Microsoft HQ, Paddington

**Solving Modern Strategic Dilemmas** – Hosted by Co-Chair Ettie McCormack

We are moving at an accelerating pace from a world of problems, which demand speed, analysis and elimination of uncertainty to solve – to a world of dilemmas, which demand patience, sense making and engaging with uncertainty. The main characteristics of these modern strategic dilemmas are:

- Seemingly unsolvable
- Complex and often messy
- Threatening
- Enigmatic and confusing
- Two or more puzzling choices

Explore ways you can help your clients, and yourself, to engage with complexity and strategic sense-making beyond operational problem solving. Understand what can happen when we step outside of the comfort zone and navigate different ways to thrive in challenging environments.

**Research by Fosway Group**

At this session we will be joined by David Perring (Director of Research) of Fosway Group who will be sharing the very latest insight into trends in learning and sharing findings from their very latest report.

**Top 20 Learning Providers Launch**

We are also excited to announce the 20 Highest Learning Providers ahead of the general release the following day. [Click here to see last year's top 20](#)

**Capabilities of the digital learning service of the future** – Hosted by Myles Runham

Genuine digital value is not achieved by technology implementation alone but relies on the teams that manage the tools and their application. For the technology and tools to be used to greatest effect, there are lessons from other industries about the capabilities required for an effective digital learning service. The traditional capabilities of an L&D team or department are not sufficient (or relevant perhaps) to prepare for this future.
